Project Design Phase

Solution Architecture

Date	November 2026
Student Name	Rachabathula Gnana Sruthi
Project Name	Automated Network Request Management
Maximum Marks	

Solution Architecture

The architecture bridges the employee-facing portal experience with ServiceNow application configuration, validation rules and the backend Employee Raise Issue table.

Layer	Components	Responsibility
Experience	Service Portal (/sp), homepage, network widgets, catalog items.	Employee network service submission UI.
Interaction	Client Script / AngularJS	Redirect from widget to Record Producer and handle form interaction.
Catalog	Network Request Record Producer	Collect structured network parameters and map to backend table.
Rules	UI Policies and dependency choices	Validate network parameters and control field visibility dynamically.
Data	Custom Table (u_network_requests)	Persist network request records and audit trails.
References	sys_user, sys_user_group	Reference data for requesters, managers, and assignment groups.
